

NeuralNet Coin (NNC) Whitepaper

I. Introduction

NeuralNet Coin (NNC) is a decentralized cryptocurrency built on the Solana blockchain, designed to bridge human innovation with artificial intelligence. Its mission is to create a reward-driven ecosystem where users contribute to AI learning, data generation, and model improvement through a decentralized network.

II. Vision

NNC envisions a future where human intelligence and artificial intelligence operate symbiotically. By decentralizing the development and utilization of AI, NeuralNet Coin promotes transparency, collaboration, and fair compensation for human input.

III. Tokenomics

- Token Name: NeuralNet Coin
- Symbol: NNC
- Network: Solana
- Creator Fee: 0.15%
- Use Case: Governance, Data Exchange, AI Model Contribution Rewards

IV. Utility

The NNC ecosystem incentivizes participation in AI training and infrastructure building. Users and developers can contribute to decentralized machine learning tasks, data annotation, and computational processes, earning NNC as compensation. Over time, this creates an open-source AI knowledge network powered by human effort.

V. Detailed Roadmap

Phase 1: Token Creation & Branding (Q4 2025)

- Establish NeuralNet Coin identity and community foundation.
- Launch token via Moonshot and integrate with Solana ecosystem.
- Begin social media presence and initiate verification process on Solscan and Phantom.

Phase 2: AI Utility Development (Q1–Q2 2026)

- Launch basic AI infrastructure to support decentralized data and model contributions.
- Introduce NeuralNet Utility Layer for real-time participation rewards.
- Begin pilot partnerships with open-source AI developers to test decentralized learning protocols.
- Deploy data contribution reward smart contracts for transparency.

Phase 3: Neural Network Integration (Q3–Q4 2026)

- Integrate functional AI nodes where \$NNC tokens power network computation.
- Develop community-driven datasets and allow staking for resource access.
- Implement NeuralNet API for developers to connect applications and AI agents.
- Prepare NNC token for cross-platform integration and decentralized data liquidity.

Phase 4: DAO Governance & Expansion (2027)

- Establish NeuralNet DAO where holders can vote on system proposals and upgrades.
- Enable treasury management through NNC-based smart contracts.
- Expand ecosystem partnerships with AI and blockchain research initiatives.
- Move toward full decentralization of the NeuralNet AI network.

Phase 5: Long-Term Sustainability (Beyond 2027)

- Introduce scalable AI model hosting and human-AI collaboration interfaces.
- Build long-term token stability through deflationary mechanisms and staking rewards.
- Foster global participation through education, transparency, and open collaboration.

VI. Governance

The NeuralNet Coin DAO will allow holders to vote on ecosystem proposals, partnerships, and AI integration initiatives. Decentralized governance ensures long-term community-driven innovation and transparency.

VII. Future Outlook

As the demand for decentralized AI grows, NeuralNet Coin positions itself as a central node in the global effort to democratize artificial intelligence and data value creation.
